

# KUJENGA MAISHA EAST AFRICA (KUMEA) - UGANDA

## Project Completion Report

Dated: 17<sup>th</sup> April 2018

### Project Location:

- Kampala Hoima,
- Hoima Kigorobya road (2miles) to Katasiha
- Katasiha to Mbarara (19 miles)
- Mbarara to Katanga (3miles)
- Katanga to Kasenene
- Kasenene to Bisaju

### Project Goal

The people in Bisaju are experiencing challenges with getting water to use.

- Firstly, the Location of the place. Bisaju is located near Budongo Forest, the only water surface they had was in the forest. Life in the forest has not been easy as the citizens explained to me, they have been getting challenges with wild animals, the forest rangers who could not allow them time to time to freely use the waters from the forest.
- The chairman of the area Mr. Kaahwa Esau (+256 788 055 665) explained that his people have been walking distances to fetch water from Kyalukumu and Kyoganibanywa wells.

### Beneficiaries

The chairman explained to me that there are 300 households approximately 1020 people in the area. Therefore, he added that this shallow well will be benefited by about 100 households approximately 300 people.

In the picture above is the beginning of digging the bore hole at Bisaju. But this hole could not be completed because of the hard rock found at 5 feet after top soil. This forced to shift to about 1 km from here.
